SEO + GEO + AIO Audit: lacaralarm.com (LA Car Alarm)

Audit date: 2026-10-04 (UTC). Read-only. Nothing changed on any site or repo. Companion files: SCHEMA_REPORT.md, AI_SEARCH_REPORT.md, pages.csv (57 rows), LIMITATIONS.md. Business: LA Car Alarm, the alarm / remote start brand of Audio MotorSports Inc, 22025 S Avalon Blvd Ste A, Carson CA 90745, (310) 513-8800.

Evidence labels (read this first)

- **[standalone-verified]**: observed directly on lacaralarm.com. Only the apex response headers qualify. www.lacaralarm.com is blocked by the egress proxy (403, retested once, not bypassed).
- **[mount-proxy]**: observed on the **hub-mounted copy, proxy for the standalone domain, standalone not verified** at https://www.audiomotorsports.com/alarm/. 56 pages fetched (home, about, services, blog, FAQ, shop, locations, es, 26 city pages). Every [mount-proxy] finding is a hypothesis about lacaralarm.com until www is reachable.

1. Standalone-verified facts (apex)

Check	Result
https://lacaralarm.com/	HTTP/2 308 to https://www.lacaralarm.com/ (Vercel)
http://lacaralarm.com/	308 to https://lacaralarm.com/, then 308 to www: two hops
/robots.txt, /sitemap.xml, /llms.txt on apex	each 308 to the www path; contents not readable
HSTS	`max-age=63072000` (2 years). No includeSubDomains or preload token on the apex response
TLS	TLS 1.3, Let's Encrypt cert for lacaralarm.com, valid to 2026-11-08
Redirect type	308 permanent, correct for apex-to-www consolidation

Assessment: the apex is healthy and uses the right redirect type. Two small improvements: collapse http-to-www into one hop, and consider adding `includeSubDomains` (shop.lacaralarm.com exists) once every subdomain is HTTPS-only. Whether www serves 200, what robots says and what the canonical host is remain unverified.

2. Health summary (mount-proxy, heuristic, not a Lighthouse score)

Area	Status	Note
Indexability (Googlebot / snippets)	Good	56/56 fetched pages 200, no robots meta, no X-Robots-Tag, no nosnippet/max-snippet; hub robots.txt is `Allow: /` for all agents
Canonicals	Needs verification	All 56 canonicals are self-referencing, but to audiomotorsports.com/alarm/..., not lacaralarm.com
Titles	Good	All unique; 55 of 56 are 60 chars or less; one at 61 (Rancho Palos Verdes)
Meta descriptions	Fair	Present everywhere, unique, but short: mean 128 chars, 14 pages under 120, shortest 71 (/alarm/shop/)
H1	Good	Exactly one H1 per page
Schema	Good coverage, inconsistent	AutoRepair + FAQPage + BreadcrumbList + Service everywhere; but 4 entity variants and URL host mismatch (see SCHEMA_REPORT.md)
Answer-readiness	Fair	FAQPage on 44 of 56 sampled pages; service pages reuse the home FAQ; no Carson-targeted passage
Local content	Mixed	City pages are unique in numbers but formulaic; contain internal-style instruction phrases; no Carson page

Area	Status	Note
Internal linking	Good	Locations hub links 112 city pages; each city page links about 9-10 /alarm/ URLs
AI/GEO	Good access, thin llms	Hub robots allows all AI bots; no lacaralarm.com-specific llms.txt verified

3. Findings

F1 [mount-proxy] High: canonical, og:url and all schema URLs point at the hub host

Evidence: on all 56 pages `<link rel="canonical">` and `og:url` equal the audiomotorsports.com/alarm/... URL; the LocalBusiness `@id` is `https://www.audiomotorsports.com/alarm/#business`; sameAs lists audiomotorsports.com, and lacaralarm.com appears in markup only as `shop.lacaralarm.com` product links. lacaralarm.com is never declared as the brand's own URL. Why it matters (Google): if the standalone build emits the same canonicals, Google is told lacaralarm.com's pages are copies of the hub's and may prefer the hub URL, so lacaralarm.com would not rank under its own name. Unverified for standalone. Fix (improve, no consolidation): verify what www.lacaralarm.com emits. It should self-canonical to https://www.lacaralarm.com/, with og:url, schema `url`, `@id` and breadcrumb items on the same host. Give each host its own unique introductory copy so the two copies differentiate rather than duplicate.

F2 [mount-proxy] High: internal-style instruction text and contradictions on city pages

Evidence: city pages contain what reads like editorial guardrails, visible to users and crawlers: "Never imply nearby" / "Never claim nearby" (6 of 26 sampled), "Do not reverse that" (20 of 26), "Mickey Mouse" (20 of 26), "Zack runs the floor" (21 of 26), and "Closed today. Text Nick now and we'll hold a Monday 9:30 slot" banner in the HTML of 26 of 26. Irvine page also mentions "Spectrum" as local color. Also "we do not publish a dollar" (26 of 26) on every city page while /alarm/faq/ publishes "Viper 3108V is $269 installed. Compustar 9910 is $499 installed". Why it matters: quoted by AI engines as-is, these read as unprofessional or contradictory and weaken trust; a price contradiction between pages lowers answer confidence. Fix: rewrite those sentences as customer-facing copy (for example "Plan the drive: Irvine is 27 miles, 40 to 60 minutes; book a 9:30 slot") and add the two published prices to city/service pages, matching the FAQ.

F3 [mount-proxy] High: no Carson-intent page or passage

Evidence: /alarm/car-alarm-carson/ returns 404. Carson appears only in the address, footer and a "Carson bay" line; the home H1 is "Car alarm and remote start in Los Angeles". West Carson (1.8 mi) has a page. The closest-to-shop query "remote start installation carson ca" has no page that answers it directly. Fix (additive): add a "Remote start and car alarm in Carson" section with address, hours, drive directions from the 405/110, and published prices to /alarm/ (home) and /alarm/services/remote-start/ and link it from /alarm/car-alarm-west-carson/. A separate Carson URL is a project-level decision for the owner (hub policy says no shop-city doorway page); adding the section carries no such conflict. Do not substitute LA wording for Carson wording.

F4 [mount-proxy] Medium: service pages repeat the homepage FAQ

Evidence: 12 pages (home, es home, services index and all 9 service pages sampled) carry the identical 8-question FAQPage: "Viper or Compustar — which do I need?", "Why are Jeeps, Kias, and Hondas stolen so often?", etc. Remote start, GPS, door actuators, fleet and dash cam pages do not answer their own topic's questions in FAQ form. Fix: keep the shared 3 general questions, replace the other 5 per page with topic questions (see AI_SEARCH_REPORT.md, queries 1, 4, 6).

F5 [mount-proxy] Medium: city pages share about 60 percent of text; local specifics thin

Evidence: word-sequence similarity after masking the city name is 0.58 to 0.65 across five compared pairs (Torrance, Gardena, Irvine, Newport Beach, Wilmington). Distinct parts: mileage, drive time, 8 city-named FAQs (answers use the template, for example "Torrance is 4.4 miles"). Few pages (26 sampled)

have only 2 images. Fix: add per page: nearest freeways and exits, one named neighborhood or landmark, a vehicle theft angle for that area only where supported by a source, 1 install photo from a car owned in that area, and keep the 40-80 word answer-first answer at the top. No page is removed.

F6 [mount-proxy] Medium: short meta descriptions, generic city titles

Evidence: mean meta length 128 chars (range 71 to 167); 14 pages under 120. City titles all follow "Car Alarm Installation for | LA Car Alarm" (50 to 61 chars) and omit remote start and Viper/Compustar. Home title "Car Alarm & Remote Start LA | Viper & Compustar" is good. Blog index title is 19 chars. Fix: extend metas toward 140-155 chars with the drive distance and a published price (for example "Torrance to our Carson bay: 4.4 miles. Viper 3108V alarm $269 installed. Call (310) 513-8800."). Lengthen the blog title.

F7 [mount-proxy] Medium: blog thin on freshness and authors

Evidence: only 3 posts; BlogPosting `datePublished` 2026-08-13 on the sampled post; no dateModified on pages, no visible author byline beyond staff names in the home schema (Albert, Richard are named in copy). Fix: add visible "Reviewed by Richard (Remote Start Alarm System Certified), updated " and a dateModified to service and blog pages; add posts for the queries in AI_SEARCH_REPORT.md.

F8 [mount-proxy] Low: Spanish version is homepage-level only

Evidence: /alarm/es/ with hreflang en/es/x-default on the home; es pages exist for 9 info pages (per sitemap); city and service pages have no hreflang. No issue, just an opportunity: add es versions and reciprocal hreflang for the 6 service pages.

F9 [standalone-verified] Low: redirect chain and HSTS scope

Evidence: http://lacaralarm.com goes 308, 308 (two hops) to www; HSTS on apex has no includeSubDomains/preload. Fix: configure a single-hop http-to-https-www redirect where the platform allows it, and add includeSubDomains after confirming shop.lacaralarm.com and other subdomains are HTTPS-only.

F10 [mount-proxy] Low: images and internal links

Evidence: home 33 images with alt text, none missing; city pages only 2 images; 37 links from the home page point to shop.lacaralarm.com (product pages) — good cross-linking between www and shop. Opportunity: add install photos per city. Product schema on shop.lacaralarm.com unverified.

4. What is working (keep)

Unique titles and exactly one H1 on every page; BreadcrumbList on all inner pages; FAQPage on 44 of 56 fetched pages (every page type except info and shop pages) with matching visible `<details>`; consistent phone +13105138800 (46 of 52 blocks; 6 use "(310) 513-8800" formatting); consistent NAP; YouTube VideoObject with 2026-09-25 uploadDate; hub robots allows every crawler; locations hub links 112 cities.

5. Prioritized list

Format: page | problem | report | impact | effort | exact next step | tag. All steps improve pages; none remove, merge, redirect or noindex anything.

#	Page	Problem	Report	Impact	Effort	Exact next step	Tag
1	www.lacaralarm.com (all)	Cannot verify canonical host, robots, sitemap, llms	LIMITATIONS	google+ai	quick	Allow www.lacaralarm.com and shop.lacaralarm.com in the proxy, then re-run the crawl and fill pages.csv	[standalone-verified]
2	All pages			google	medium		[mount-proxy]

#	Page	Problem	Report	Impact	Effort	Exact next step	Tag
		Canonical, og:url, schema url/@id point to audiomotorsports.com/alarm	AUDIT F1, SCHEMA S1			On the standalone build set canonical/ og:url/schema to https://www.lacaralarm.com/; add unique intro per host	
3	/alarm/car-alarm-* (26 sampled of 145)	Visible internal instructions ("Never imply nearby", "Do not reverse that"), "Closed today" banner, "we do not publish a dollar" contradicting FAQ prices	AUDIT F2	google+ai	medium	Rewrite 6 phrases into customer-facing copy in the city template; add Viper 3108V $269 and Compustar 9910 $499 installed	[mount-proxy]
4	/alarm/ and /alarm/services/remote-start/	No Carson passage for "remote start installation carson ca"	AI Q1, AUDIT F3	google+ai	quick	Add the Carson answer block (60 words, in AI_SEARCH_REPORT Q1) under an H2 "Remote start installation in Carson, CA"	[mount-proxy]
5	/alarm/services/* (9)	Identical 8-question FAQ copied from home	AUDIT F4, SCHEMA S3	google+ai	medium	Swap 5 of 8 questions per page for topic questions; keep schema in sync with visible details	[mount-proxy]
6	City pages (145)	~60 percent shared text	AUDIT F5	google	project	Add per-city freeways, landmark, photo, one local FAQ; roll out Carson-near and South Bay first	[mount-proxy]
7	Entity schema (home vs city pages)	4 LocalBusiness variants, mixed phone formats, AutomotiveBusiness+AutoRepair vs LocalBusiness	SCHEMA S2	google	quick	Use one @type array and one @id block; telephone +13105138800 everywhere	[mount-proxy]
8	City + service titles/ metas	Short metas (mean 128), templated titles	AUDIT F6	google	quick	Rewrite metas to 140-155 chars with drive distance and a price	[mount-proxy]
9	llms.txt (lacaralarm.com)	Not verifiable; hub llms.txt covers AMS only	AI_SEARCH	ai	quick	Publish/verify a lacaralarm.com/llms.txt with address, prices, services, drive-in areas	[standalone-verified] gap
10	Blog (3 posts), service pages	No dateModified/author; thin freshness	AUDIT F7	ai+google	medium	Add visible "updated" date, reviewer line, dateModified; write 4 posts from sample queries	[mount-proxy]
11	http://lacaralarm.com	Two redirect hops; HSTS without includeSubDomains	AUDIT F9	google	quick	Single-hop redirect to https://www; add includeSubDomains after subdomain check	[standalone-verified]
12	/alarm/es/ + service pages	hreflang only on home	AUDIT F8	google	medium	Add es service pages with reciprocal hreflang	[mount-proxy]

Schema report: lacaralarm.com (LA Car Alarm)

Audit date 2026-10-04. Source: **hub-mounted copy, proxy for the standalone domain, standalone not verified** (https://www.audiomotorsports.com/alarm/..., 56 pages). Nothing on www.lacaralarm.com could be fetched. Every item below is [mount-proxy].

Inventory (56 pages fetched, all JSON-LD parsed, 0 invalid JSON)

Type	Pages	Notes
BreadcrumbList	53	Missing on home, es home, /book/; fine
AutoRepair (entity)	46	Main entity on most pages
AutomotiveBusiness + AutoRepair (array)	2 (home, es home)	Richest block: sameAs x12, areaServed 31 cities + GeoCircle, employees
LocalBusiness	6 (West Carson, Anaheim, Huntington Beach, Santa Monica, Pasadena, Glendale)	Different type, name and `@id` pattern than the rest
FAQPage	44	Home, es home, services (11 incl. index), blog (4), FAQ page and 26 city pages
Service	10	Service pages, provider referenced as AutoRepair
BlogPosting / Blog	3 / 1	datePublished present (sample 2026-08-13)
VideoObject	37	uploadDate 2026-09-25
ItemList / CollectionPage / WebSite	2 / 3 / 2	

Findings

S1 [mount-proxy] High: every URL and @id is on audiomotorsports.com

`@id` = https://www.audiomotorsports.com/alarm/#business, `url` = the hub URL on all pages, breadcrumb `item` and og:url likewise. lacaralarm.com is not declared as the brand's URL or `sameAs`; sister domains lacarbeats.com, lacartint.com, amspods.com and teslatintla.com ARE in `sameAs` but lacaralarm.com is not. Impact (Google + AI): entity resolution ties the "LA Car Alarm" brand to audiomotorsports.com rather than the domain named in the brand. Fix: on the standalone build emit `url`, `@id` (https://www.lacaralarm.com/#business) and breadcrumbs on the lacaralarm.com host, with `parentOrganization`/`sameAs` pointing to audiomotorsports.com. Verify first; the standalone output is unknown.

S2 [mount-proxy] Medium: four entity variants for one business

- Home: `["AutomotiveBusiness","AutoRepair"]`, name "Audio MotorSports", alternateName includes "LA Car Alarm", telephone +13105138800, priceRange "$$".
- Service pages and 20 city pages: `AutoRepair`, name "LA Car Alarm".
- 6 city pages: `LocalBusiness`, name "LA Car Alarm at Audio MotorSports", telephone "(310) 513-8800", `openingHours` string instead of `openingHoursSpecification`, geo as numbers (33.8317) not strings, shared `@id` with a different `url` per page.
- West Carson geo (33.8317, -118.2645) differs from the shop geo (33.8270, -118.2650) used elsewhere; the former may be intentional as a page-center and should not be used as the business location. Fix: one canonical entity block: `@type: ["AutomotiveBusiness","AutoRepair"]`, name "LA Car Alarm", legalName "Audio MotorSports Inc", one `@id`, telephone +13105138800 on all 52 blocks (6 use the other format), same geo, same hours format. Per-city pages should reference the entity by `@id` and add only `areaServed`.

S3 [mount-proxy] Medium: FAQ schema repeated across service pages

Same 8 FAQ items on home, es home, services index and 9 service pages (12 pages). Schema matches visible <details> where tested (0 mismatches across 44 FAQPage blocks: every schema question and first 60 chars of the answer are in the visible text), so parity is good, but duplicate FAQs give no topic signal. Fix: topic-specific questions per service page; keep schema and visible text identical. Note: Google limits FAQ rich results to authoritative government/health sites since 2023, so this is for AI/answer-engine parsing, not a Google rich result.

S4 [mount-proxy] Low: self-serving AggregateRating

`AggregateRating` 4.8 from 654 (28 blocks) matches the visible "Google 4.8 from 654" on the home page. Google does not show review stars for self-serving LocalBusiness ratings; harmless, but ensure the number tracks the GBP count and add `dateModified` when the count changes. Yelp 4.7 from 777 is shown on the page but not in schema.

S5 [mount-proxy] Low: missing fields worth adding

- `hasMap` (the Google Maps CID URL already in sameAs), `paymentAccepted`, `knowsAbout` (Viper, Compustar, DroneMobile, remote start, immobilizer, GPS tracking).
- Service pages: `offers` with `price` for Viper 3108V ($269 installed) and Compustar 9910 (from $499 installed), `areaServed` Carson/South Bay/LA/Orange County, `hasOfferCatalog`.
- Home: `dateModified`; BlogPosting: `author` Person with `url`, `dateModified`.
- BreadcrumbList on home/book not needed.

Validation status

Rich-results test and Schema.org validator were not run (no external fetch of a lacaralarm.com URL possible; hub URLs are not the target property). JSON syntax and field presence verified locally.

AI search report (GEO + AIO): lacaralarm.com

Audit date 2026-10-04. AIO = Google AI Overviews. Evidence label for everything below unless stated: **hub-mounted copy, proxy for the standalone domain, standalone not verified** [mount-proxy]. Apex facts are [standalone-verified]. www.lacaralarm.com is proxy-blocked.

1. AI-crawler access

Agent	Standalone	Hub (proxy)
Googlebot, Bingbot, OAI-SearchBot, ChatGPT-User, PerplexityBot, ClaudeBot, Claude-SearchBot, Google-Extended, Applebot-Extended	**Not verifiable**: lacaralarm.com/robots.txt 308s to www (blocked) [standalone-verified: redirect only]	audiomotorsports.com/robots.txt: one group `User-agent: *`, `Allow: /`, `Disallow: /admin/`, `Disallow: /planner/`, sitemap listed. No bot is blocked; none is named. /alarm/ is crawlable
Notes: `/alarm/robots.txt` is 404 on the hub because robots lives at host root; the standalone host serves its own. Google-Extended affects Gemini training/grounding only, not AI Overviews or Search, so it should stay unblocked for answer-engine reach but is not an AIO lever. No X-Robots-Tag and no robots meta found on 56 pages.		

2. AIO eligibility (Google AI Overviews)

Requirement: page indexed by Googlebot, snippet-eligible. Checked on 56 mounted pages: HTTP 200, no `noindex`, no `nosnippet`/`max-snippet:0`, not disallowed. **Eligible [mount-proxy].** For lacaralarm.com itself: unverified. The dominant risk is canonical host (AUDIT F1): if lacaralarm.com pages canonicalize to audiomotorsports.com/alarm/, Google may index and cite the hub URL instead, so the standalone domain would earn no AIO citation. This is verification-first, not a removal task.

3. llms.txt

- lacaralarm.com/llms.txt: 308 to www, content unverified [standalone-verified for redirect].
- Hub https://www.audiomotorsports.com/llms.txt exists (good quality: address, hours, phone and text lines, published prices Viper 3108V $269 installed, Compustar 9910 from $499 installed, what is not done, drive-in policy, 9 key pages; mentions LA Car Alarm only as a network line). It has no alarm-specific section: no Viper vs Compustar guidance, no remote start/DroneMobile summary, no list of the 145 alarm drive-in pages.
- Google Search does not use llms.txt; it matters for assistants that read it (unverified which ones). Low cost to improve. Fix: a lacaralarm.com/llms.txt with business facts, "Published prices", brand roles, key pages, and a pointer to /locations/. Add a sentence on remote start vs immobilizer; leave warranty out (hub llms says not to mention it).

4. Answer-ready content audit [mount-proxy]

Signal	Finding
Question-style headings	City pages: one H2 "FAQ" with 8 `<details>`; question text is not a heading element. Service pages: "Quick answers" H2 + questions inside details. Home: FAQ questions appear as H2/H3
Answer-first passages (40-80 words)	Torrance sample: 4 answers measured 45, 100, 40, 32 words. First answer "No. There is no Torrance alarm storefront..." is a denial, not an answer to "car alarm near Torrance"
Comparison/table	Viper vs Compustar is paragraph-only; no table; no price table on service pages
Prices	Published only on /alarm/faq/ ($269, $499); city pages say they do not publish a dollar (contradiction)

Signal	Finding
Freshness	Blog datePublished 2026-08-13; no visible "updated" dates on service/city pages; hub llms says prices verified September 2026
Author/experience	Staff named (Richard certified since 1998, Albert Firstech tech) but no bylines or reviewer line on content pages
Entity consistency	NAP identical; name varies (LA Car Alarm / Audio MotorSports / LA Car Alarm at Audio MotorSports); lacaralarm.com not in sameAs
Internal links	Strong: locations hub to 112 cities; cities to services/book/payment

FAQ and schema parity

44 FAQPage blocks vs visible <details>: 0 mismatches (question and first 60 chars of answer present). Parity is good. Problem is repetition: 12 pages share the same 8 questions.

5. Eight sample queries (target page plus passage to add)

Passages are drafts for the owner's review; facts come from the pages and hub llms.txt only. Items marked "confirm" need shop sign-off.

1. **remote start installation carson ca** | target /alarm/services/remote-start/ (and a Carson block on /alarm/). Add under H2 "Remote start installation in Carson, CA": "Audio MotorSports installs remote start in Carson at 22025 S Avalon Blvd Ste A, Monday to Saturday 9:30 AM to 6:00 PM. We use the vehicle-specific bypass module so your factory immobilizer stays active, wire brake, hood and in-gear lockouts, and test cold and warm starts before you get your keys. Compustar 9910 starts at $499 installed on most cars. Call (310) 513-8800."

2. **car alarm installation near torrance** | target /alarm/car-alarm-torrance/. Replace the first answer ("No. There is no Torrance storefront") with: "The nearest LA Car Alarm install bay is 4.4 miles from Torrance at 22025 S Avalon Blvd Ste A in Carson, about ten to fifteen minutes by the 405 and Avalon. Viper and Compustar alarms are installed in-house, not mobile. A Viper 3108V alarm is $269 installed. Call (310) 513-8800 and ask for Nick."

3. **how much does a car alarm cost in los angeles** | target /alarm/faq/ and /alarm/services/car-alarms/. Add table plus answer: "At LA Car Alarm in Carson, the Viper 3108V alarm is $269 installed and the Compustar 9910 remote start and alarm starts at $499 installed on most cars. DroneMobile, GPS and anti-theft modules for Chargers, Challengers and Jeeps are quoted by vehicle. Send year, make and model to (213) 429-1092." Add the price table with "prices verified September 2026".

4. **best anti theft for dodge charger / jeep wrangler los angeles** | target /alarm/services/charger-challenger-anti-theft/. Add FAQ "What stops a Charger, Challenger or Wrangler from being stolen?": "A siren alone does not stop relay or copied-code theft. LA Car Alarm fits Compustar with a Firstech anti-theft module that interrupts the starter, because Compustar kills the ignition when the fob walks away. Albert, a Firstech technician, installs it at our Carson bay. Quotes are by vehicle; call (310) 513-8800."

5. **viper vs compustar** | target /alarm/blog/viper-vs-compustar/. Add a comparison table (ecosystem, app, ignition kill behavior, best for) and this lead: "Viper and Compustar are different hardware families: DroneMobile works only with Compustar, SmartStart only with Viper. We pick by the car: Compustar for Jeep, Dodge and Chrysler where copied-code theft is common, Viper for GMC, Ford and fleet vehicles. Both are installed in Carson by certified technicians."

6. **can you remote start a push to start car** | target /alarm/services/remote-start/ (FAQ exists on home but not written for it). Add a 50-word answer after confirming supported models with the shop: "Yes on most push-to-start vehicles, with a vehicle-specific bypass module [confirm models]. Send year, make and model to (213) 429-1092 and Nick confirms the exact module and price before you book."

7. **car alarm installation orange county / irvine** | target /alarm/car-alarm-irvine/ and /alarm/car-alarm-anaheim/. Replace the opening with: "LA Car Alarm installs Viper and Compustar for Orange County drivers at one Carson shop, 27 miles and about 40 to 60 minutes from Irvine by the 405. Book a 9:30 or 10:00 AM slot and leave the car for the day or drop off overnight. Call (310) 513-8800. No mobile installs."

8. **south bay car alarm shop** | target `/alarm/locations/` and `/alarm/car-alarm-redondo-beach/`. Add under H2 "South Bay car alarm installation": "One install bay at 22025 S Avalon Blvd Ste A in Carson serves the South Bay: Torrance 4.4 miles, Gardena, Lomita, Harbor City, Wilmington, San Pedro, Redondo, Hermosa and Manhattan Beach. Same-day Viper and Compustar installs, Monday to Saturday 9:30 to 6. Call (310) 513-8800 or text (213) 429-1092."

6. Prioritized AI/AIO items

Page	Problem	Impact	Effort	Exact next step	Tag
lacaralarm.com/robots.txt, /llms.txt	Cannot read (308 to blocked www)	ai+google	quick	Allow www and re-test; confirm no AI bot blocked	[standalone-verified]
All pages	Canonical/schema host = audiomotorsports.com	google+ai	medium	Verify and self-canonical standalone	[mount-proxy]
/alarm/services/remote-start/, /alarm/	No Carson passage	google+ai	quick	Add Q1 passage	[mount-proxy]
City pages (145)	First answer is a denial; no price; contradictions	ai	medium	Replace opening with Q2/Q7 pattern; add $269/$499	[mount-proxy]
/alarm/faq/, /alarm/services/car-alarms/	Prices not tabled	ai	quick	Add price table, "verified September 2026"	[mount-proxy]
/alarm/services/*	Duplicate FAQs	ai	medium	Topic questions, Q3-Q6	[mount-proxy]
/alarm/blog/viper-vs-compustar/	Paragraph-only comparison	ai	quick	Add table and lead	[mount-proxy]
llms.txt	No alarm section	ai	quick	Add alarm block	[mount-proxy]

lacaralarm.com: LIMITATIONS (replaces STATUS.md)

Audit date 2026-10-04 (UTC). Read-only; nothing was changed anywhere.

What could not be done

- https://www.lacaralarm.com/ is refused by the egress proxy (CONNECT 403). Retested once at the start of this run: still 403. Not bypassed, per RULES.md.
- The apex https://lacaralarm.com/ answers, but every path (/, /robots.txt, /sitemap.xml, /llms.txt) returns 308 to the same path on www. So the standalone site's HTML, robots.txt, sitemap, llms.txt, schema, canonicals, titles and Core Web Vitals were NOT fetched or verified.
- shop.lacaralarm.com (linked ~17 times from the hub copy) was not fetched either; not tested, assumed same restriction.
- No Search Console, GBP, PageSpeed/CrUX or analytics access. Nothing here is a ranking or traffic claim.

Evidence that IS standalone-verified (apex headers only, fetched 2026-10-04 04:24 UTC)

- https://lacaralarm.com/ : HTTP/2 308, `location: https://www.lacaralarm.com/`, `server: Vercel`, `strict-transport-security: max-age=63072000` (no includeSubDomains or preload token seen), `cache-control: public, max-age=0, must-revalidate`, `refresh: 0;url=https://www.lacaralarm.com/`.
- http://lacaralarm.com/ : 308 to https://lacaralarm.com/ (then a second 308 to www). Two hops before content.
- /robots.txt, /sitemap.xml, /llms.txt on apex: each 308 to the www equivalent. Contents unknown.
- TLS: TLSv1.3, cert CN=lacaralarm.com, Let's Encrypt (YR2), valid Aug 10 2026 to Nov 8 2026 (auto-renewal assumed on Vercel, not verified).

Proxy evidence used instead (labelled everywhere "hub-mounted copy, proxy for the standalone domain, standalone not verified")

- https://www.audiomotorsports.com/alarm/ and 56 URLs under it (home, 3 blog posts, 9 service pages, 26 city pages, es home, shop and info pages). 56 returned 200; /alarm/car-alarm-carson/ returned 404.
- The hub sitemap lists 204 URLs under /alarm/ (145 city pages and 59 others: es, services, shop, blog, info). The hub's "~340 pages link to lacaralarm.com" figure was not independently counted; the 204 here is the mount's own count.
- The hub's robots.txt, sitemap.xml and llms.txt describe audiomotorsports.com, not lacaralarm.com. /alarm/robots.txt, /alarm/llms.txt, /alarm/sitemap.xml are 404 on the hub.
- Limits of the proxy: the mounted copy may differ from the standalone build (hosts, canonicals, og:url, schema @id, robots, headers). Its canonicals and schema URLs all point at audiomotorsports.com/alarm/..., which is exactly what cannot be assumed for lacaralarm.com.

To close the gap

Allow www.lacaralarm.com (and shop.lacaralarm.com) in the environment's allowed domains, then re-run: robots.txt, sitemap.xml, llms.txt, canonical/og/schema host, header check, crawl.
