SEO + GEO Audit: shop.audiomotorsports.com

Audited 2026-10-04 (UTC). Read-only. Nothing was modified anywhere.

Method and limits (read first)

- Fetched with curl through the egress proxy. Fetches were intermittently flaky (TLS resets and timeouts) and were retried up to 4 times. All pages below were eventually fetched.
- Fetched: homepage, robots.txt, llms.txt, shop-sitemap.xml, all 42 sitemap URLs, 3 facet/parameter URLs, 14 product detail pages (sampled across 9 categories), the hub homepage / robots.txt / sitemap.xml / llms.txt on www.audiomotorsports.com, and a few hub `/stereo/`, `/beats/`, `/alarm/` shop pages.
- NOT verified: Core Web Vitals (PageSpeed API returned 429 quota exceeded; no lab run was done), the sister domains (lacarbeats.com, lacartint.com, lacaralarm.com, amspods.com, teslatintla.com all returned 403 from the egress proxy), Search Console indexation, Merchant Center feed status, plain-HTTP to HTTPS redirect (the proxy returned 403 for `http://`), rendered/JS view (HTML is server-rendered; no browser render was run).
- Scores are my own estimates from fetched evidence, not tool output.
- `pages.csv` has url, title, H1, meta description for 61 URLs (42 sitemap URLs, 3 parameter variants, checkout, and 14 sampled product pages; the homepage is not a row because it is the hub page).

Business context

Per the site's own pages: a single Carson, CA bay (22025 S Avalon Blvd Ste A) selling car audio and security parts for **in-store pickup only** ("We don't ship"), with installation. About 285 product detail pages are linked from the collections. Hosting: Vercel. The shop is a sub-host of the main site; it is the canonical home of the catalog (the www host 308-redirects `/shop/...` to it).

Estimated scores

Area	Score	Basis
Technical	78/100	Clean 200s, HTTPS and HSTS, 308 trailing-slash, self-canonicals, noindex on checkout, fast TTFB (0.15-0.45 s). Docked for the missing homepage and products in the sitemap, and the http 403 (unverified)
	70/100	Unique titles and H1s on collections; products have thin boilerplate descriptions and 17 identical meta descriptions

Area	Score	Basis
Content / on-page		
Schema	55/100	Valid JSON-LD, but every URL points at the wrong host, and many Products lack Offers (see SCHEMA_REPORT.md)
E-commerce	55/100	No product feed signals, sitemap omits all products, about two thirds of products show "Call to confirm" with no price
GEO / AI	75/100	Open crawler access, a good llms.txt, FAQ content. Docked for entity and URL fragmentation (see AI_SEARCH_REPORT.md)

Findings

1. Product pages are not in the sitemap (High, Google)

`shop-sitemap.xml` has 42 URLs, all dated lastmod 2026-09-24: `/shop/`, 12 category pages, 18 brand pages, 4 subcategory pages, and 3 dash-camera products. The 285 product detail pages linked from the collections (for example `/shop/speakers/kicker-46csc654/`) are in no sitemap. I extracted the product-card links from the 42 sitemap pages (285 unique) and compared them with the sitemap: none is listed. The only 3 product pages in the sitemap are Momento dash cams (e.g. `/shop/dash-cameras/momento-momento-ic6/`). Discovery relies on internal links only.

2. The shop homepage canonicalizes to the hub, and is missing from the sitemap (High, Google)

`https://shop.audiomotorsports.com/` returns the hub's homepage (title "Car Window Tint & Car Audio in Carson", H1 "Shop car stereo in Carson", FAQPage, AutoRepair schema) with `<link rel="canonical" href="https://www.audiomotorsports.com/">`, `og:url` of www and a hub OG image. That is a consolidation signal and is acceptable on its own, but it means the shop host has no indexable homepage of its own and the sitemap's top entry is `/shop/`. Title/H1 also mismatch (title promises window tint, H1 and content are the shop).

3. A parallel catalog on www competes with the shop catalog (High, Google and AI)

The hub sitemap (`www.audiomotorsports.com/sitemap.xml`, 1,090 URLs) lists 148 shop-like URLs under `/stereo/shop/` (112), `/beats/shop/` (27), `/alarm/shop/` (7), plus `/amspods/shop/` and `/tint/shop/` (1 each). I fetched 4: all return 200 with self-referencing canonicals and different titles ("Amplifiers | LA Car Stereo", "Kicker Car Audio ... | LA Car Beats", "Compustar Remote Start & Security | LA Car Alarm"). They sell or describe the same brands and products as the shop host (for example Kicker, Focal, Compustar, Metra). Result: product and brand intent is split across two hosts with different brand names, which risks keyword cannibalization and duplicate-content clustering. Whether these are intentional mirrors of the sister domains is unverified (sister domains were blocked).

4. Hub sitemap lists 181 URLs that redirect (Medium, Google)

`www.audiomotorsports.com/sitemap.xml` includes 181 `https://www.audiomotorsports.com/shop/...` URLs. I confirmed `/shop/`, `/shop/brand/jbl/` and a product URL return 308 to the shop host. The rest are unverified but share the pattern. Sitemaps should list final 200 URLs only.

5. Structured data URLs point to www, not the canonical shop host (High, Google; detail in SCHEMA_REPORT.md)

On every page checked, `Product.url`, `Offer.url`, `image`, BreadcrumbList items and CollectionPage `url` use `https://www.audiomotorsports.com/shop/...`, which 308-redirects to the page being viewed. The page canonical and `og:url` use the shop host. This conflicts with the canonical, and Merchant/Product rich results expect the Offer URL to match the landing page.

6. Most products show no price and have no Offer (Medium, Google)

Priced cards in sampled collections: speakers 25/33, amplifiers 9/20, enclosures 9/15, subwoofers 10/16, car-stereos 18/146, retrofit radios 0/125, dash cameras 0/7, alarms 5/15. Where there is no price the page says "Call to confirm" and the Product JSON-LD has no `offers` (4 of the 14 sampled product pages lacked it: JVC KW-M56BT, Kicker 43DCWR122, Kicker CVR12-2, Kicker CVR12-4). Those products cannot qualify for price-based product rich results or merchant listings. This may be a deliberate business choice, but it limits Shopping visibility.

7. Duplicate meta descriptions and titles (Medium, Google)

- 17 of the 17 product pages fetched (14 sampled plus the 3 dash-cam products in the sitemap) share one identical 127-character meta description: "People ask for this. About 90% on the shelf in Carson. Call (310) 513-8800 ...".
- Product titles are just the model name plus "| Audio MotorSports" ("Kicker 46CSC654"); no product type, size or "Carson" qualifier.
- "Car Speakers in Our Carson Shop | Audio MotorSports" appears for the speakers page and its two parameter variants (same canonical, so benign).
- Product H1s are the model name only, and the on-page description is a short templated paragraph ending "We stock it in Carson for pickup and we fit it here ..." (word count not measured).

8. Parameter URLs are canonicalized but still crawlable (Low, Google)

`/shop/?sort=price`, `/shop/speakers/?brand=jbl` and `?page=2` all return 200 with identical HTML to the base page and a canonical to the clean URL. Facet links (`?size=4`, `?size=4x6`, ...) are rendered as plain `<a>` links in the sidebar. Canonicals contain it. Note `?page=2` returns the same 33 products as page 1 (no real pagination, no rel next/prev), so nothing is lost. robots.txt does not block parameters. Low crawl-budget risk at this catalog size.

9. Images and alt text (Low, Google)

Product and collection images have alt text and width/height attributes, are lazy-loaded below the fold with `fetchpriority="high"` on the first item, and use WebP `srcset` on cards. The exception: `/shop/` has 13 `alt=""` banner images (decorative, arguably fine) and `/shop/car-stereos/` has 4 images without alt. Product alt text is the model name only. Images are served from `www.audiomotorsports.com/assets/` while the page is on the shop host (cross-host, no issue for indexing but affects Offer image consistency).

10. Security and technical headers (Low)

Present: `strict-transport-security: max-age=31536000`, `x-content-type-options: nosniff`, `x-frame-options: SAMEORIGIN`, `referrer-policy: strict-origin-when-cross-origin`, `permissions-policy`. Missing: `Content-Security-Policy`; HSTS has no `includeSubDomains` or `preload`. `access-control-allow-origin: *` is set on HTML pages. Cache is `max-age=0, must-revalidate` with Vercel edge caching (x-vercel-cache: HIT), which is fine. `http://shop.audiomotorsports.com/shop/` returned 403 through the proxy; this is probably the proxy and not the site, so the http-to-https redirect is unverified.

11. Error handling (Pass)

Missing URLs (`/nonexistent-xyz/`, `/products.json`, `/cart/`, `/llms-full.txt`) return a real HTTP 404 with a branded not-found page ("Page not found | Audio MotorSports"). `/checkout/` returns 200 with `noindex, nofollow`. `/shop` 308s to `/shop/`; `/sitemap.xml` 301s to `/shop-sitemap.xml`.

12. Mobile and performance signals (partially verified)

Pass: `<meta name="viewport">`, responsive CSS, mobile hero image preload with `fetchpriority="high"`, self-hosted preloaded fonts, TTFB 0.15-0.45 s from the test location, HTML 6-20 KB compressed for most collections (car-stereos 19.8 KB, ZZ-2 brand 14 KB). Concerns: the car-stereos and retrofit collections render 146 and 125 cards in one DOM (roughly 65-72 KB of visible text each; DOM size not measured), which may hurt INP/LCP on mobile; a chat widget stylesheet (`ams-chat.css`) and GTM load on all pages. No lab or field CWV data was obtained (PageSpeed 429).

13. Internal linking and breadcrumbs (Pass with note)

Visible breadcrumbs (Home / Shop / Category / Product) and BreadcrumbList JSON-LD exist on 57 of the 61 fetched URLs. Collections link to products and cross-link to hub `/services/` pages. Note product-card links use root-relative URLs, so they stay on the shop host.

14. Robots.txt (Pass)

`User-agent: *`, `Allow: /`, `Disallow: /admin/`, `Disallow: /planner/`, `Sitemap: https://shop.audiomotorsports.com/shop-sitemap.xml`. No AI-bot-specific blocks.

What is working

Server-rendered HTML (no JS needed to see products and prices), unique collection titles and H1s, self-canonical on every collection and product, noindex on checkout, valid JSON-LD with no parse errors on any of the 61 pages, good alt text, clean 404s, fast TTFB, and strong llms.txt.

Priority list

#	Page	Problem	Report	Impact	Effort	Next step
1	All product and collection pages	Schema URLs (Product, Offer, Breadcrumb, CollectionPage) use www host, which 308s to shop host; canonical is shop host	SCHEMA_REPORT	google	quick	In the template that builds JSON-LD, use the shop origin for url, item, Offer.url
2	shop-sitemap.xml	285 product pages absent (only 3 Momento products)	AUDIT_REPORT	google	quick	Add all product URLs to the sitemap generator, resubmit in Search Console
3	www sitemap + /stereo/shop/, /beats/shop/, /alarm/shop/	148 parallel shop URLs with self-canonicals duplicate the shop catalog; 181 www /shop/ URLs in hub sitemap redirect	AUDIT_REPORT, AI_SEARCH_REPORT	both	medium	Decide canonical host per product; canonical or noindex the mirrors; drop redirecting URLs from the hub sitemap
4	Product pages without price (e.g. /shop/car-stereos/jvc-kw-m56bt/)	No Offer; retrofit 0/125 and car-stereos 18/146 priced	SCHEMA_REPORT	google	project	Publish real prices or accept no merchant rich results; never fake a price
5	All product pages	Identical meta description and name-only titles	AUDIT_REPORT	google	medium	Generate titles like "Brand Model - type, fits ...
6	https://shop.audiomotorsports.com/	Homepage is the hub page with www canonical, not in sitemap; title/H1 mismatch	AUDIT_REPORT	google	quick	Make a shop landing page or 301 / to /shop/; align title with H1
7	/llms.txt	Hub copy, drifts from hub version, has imperative directives to AI, no shop catalog detail	AI_SEARCH_REPORT	ai	quick	Write shop-specific llms.txt with factual statements; sync both copies
8	Product pages	Templated body text, little unique passage content	AI_SEARCH_REPORT	ai	project	Add fitment, what is in the box, install notes on top 50 SKUs
9	Product Offers		SCHEMA_REPORT	google	medium	Add fields to the Offer template

#	Page	Problem	Report	Impact	Effort	Next step
		Missing priceValidUntil, return/pickup policy, mpn				
10	Response headers	No CSP, HSTS without includeSubDomains	AUDIT_REPORT	google	quick	Add CSP and extend HSTS in Vercel headers config
